QATAR

A NATION WITH A WIDE VISION

The State of Qatar is enjoying a Al-Thani period of unparalleled prosperity, with exceptional economic progress being evident in the increasing standard of living of its people. Major advances in economic, human and social developments continue to occur. Despite rapid economic and social gains, as well as political change, Qatar has maintained its cultural and traditional values as an Arab and Islamic nation that considers the family to be the main pillar of society. The National Vision defines broad future trends and reflects the aspirations, objectives and culture of the Qatari people. By shedding light on the future, the Vision illuminates the fundamental choices that are available to Qatari society. Simultaneously, it inspires Qatari people to develop a set of common goals related to their future.

ABOUT US

Austin Security Services was established in 2011 and has since grown to one of Qatar's leading Security ,Surveillance Solution provider with and ever growing database of clients including Government sector and private sector. Today security systems and support is growing fast and at Austin we are committed to keeping up to date with the latest products to ensure that we can offer the best service to ensure your assets are safe and secure.

Our corporate responsibilities are bound by strong code of ethics, which we treat as the core of our business model. Respect, responsibility and determination are the pillars of our organization and with every milestone we accomplish, we strive to make room for further improvements. Reliable and sustainable products, systems and solutions combined with a competent workforce for implementing strategies constitute the unique portfolio of **Austin Security Services**.

Our commitment to quality is the result of an innovative approach, inspired leadership and creative manpower committed to continuous endeavors to stay ahead with the changing technological developments. Our broad range of high end solutions is testimonial of the position we have secured in the market. The strategic alliances we have with world class solution providers makes it easy for us to identify and suggest suitable solutions to the varying requirements of our clients with complete satisfaction

MISSION

To achieve customer delight and thereby gain their trust by giving latest cutting edge technologies and solutions with integrity and great value for money

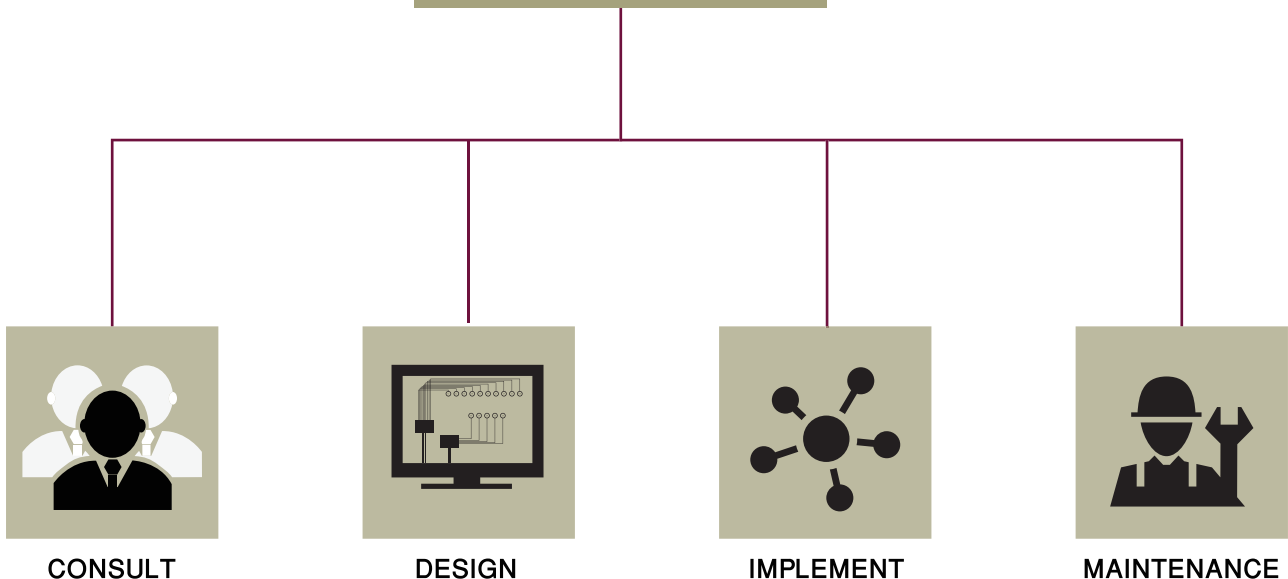

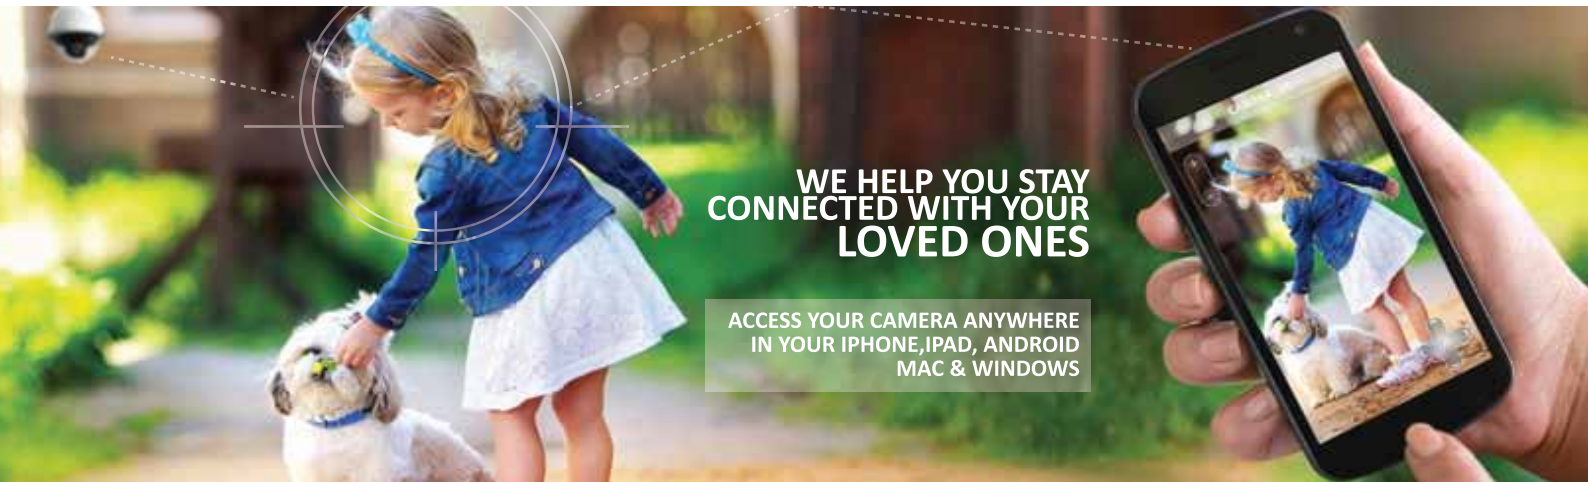

VISION

To be a leader in the fast paced development of Qatar in providing IT Solutions, State of the art Low-voltage system integrations and Mobile Electronic products distribution

OUR GOAL

Render cost effective, time bound professional service, to make the customer's life easier and more secure

OUR SOLUTIONS

SECURITY SYSTEMS

ELV SYSTEMS

IT & NETWORK SOLUTIONS

LOW VOLTAGE INTEGRATION -ELV

As cutting edge solution providers, we survey, design, supply, implement and maintain a broad range of low voltage solutions. Our team can successfully design, install and integrate these systems throughout Qatar. Our designs are custom made to suit your requirements in the best of quality and in the most cost efficient way. This include Futuristic Home Automations, Building Management systems, CCTV Security, Access controls with biometrics, Residential and Commercial SMATV installations, Public Address Systems, Audio Visual Communications, Audio/Video intercom's, Guest Room control, Parking Management, and Fiber Optic CATV networks

CCTV (CLOSED CIRCUIT TELEVISION)

STRUCTURED CABLING

TELEPHONE SYSTEM-PABX

ACCESS CONTROL SYSTEM

PUBLIC ADDRESSING (PABGM)

SMATV SYSTEM

DOOR PHONES (AUDIO & VIDEO INTERCOM SYSTEM)

GATE BARRIERS

CCTV (CLOSED CIRCUIT TELEVISION)

Closed Circuit Television (CCTV) is the use of video cameras to transmit signal to a specific, limited set of monitors. It differs from broadcast television in that the signal is not openly transmitted, though it may employ point to point wireless links. CCTV is often used for surveillance in areas which need monitoring. CCTV System is used in Different areas such as banks, casinos, airports, military installations, Hotels, Industrial warehouses and other key places.

PUBLIC ADDRESSING (PABGM)

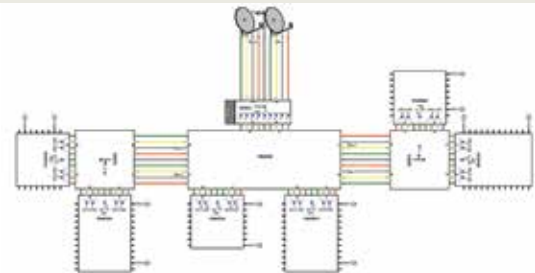

Background music (BGM) is now common place in everyday life. Its widespread use in Hotels, Café, Bars, Restaurants, Pubs, Shops and Shopping centers, and many other types of buildings proves how this popular type of atmosphere enhancement is used to great advantage. Sources can be CD changer, AM FM Tuner, Double Deck Cassette Player or Paging Microphone with zoning facility. The Background music system can be integrated with Voice evacuation or fire alarm system in which the automatic evacuation of the building is also possible

STRUCTURED CABLING

The structured cabling is the only one that needs to be installed to contend with the needs of telephone and data communications now and in the future. It is a system that handles all information traffic like voice, data, and video and even big complex building management systems. In brief, it could be describe as a system that comprises a set of transmission products, applied with engineering design rules that allow the user to apply voice, data and signals in a manner that maximizes data rates

SMATV SYSTEM

MATV stands for Master Antenna Television. It is the means by which many apartment houses hotels, schools and other multi-unit buildings distribute TV and FM signals to a number of receivers SMATV-Satellite master antenna television is an enhanced version of the previously described MATV system allows clients to combine the benefits of additional satellite programs, with the terrestrial services that are normally available to domestic viewers.

TELEPHONE SYSTEM-PABX

A private branch exchange (PBX) is a telephone exchange that serves a particular business or office, as opposed to one that a common carrier or telephone company operates for many businesses or for the general public

PABX - private automatic branch exchange EPABX - electronic private automatic branch exchange PBXs make connections among the internal telephones of a private organization—usually a business—and also connects them to the public switched telephone network (PSTN) via trunk lines. Because they incorporate telephones, fax machines, modems, and more, the general term "extension" is used to refer to any end point on the branch.

DOOR PHONES (AUDIO & VIDEO INTERCOM SYSTEM)

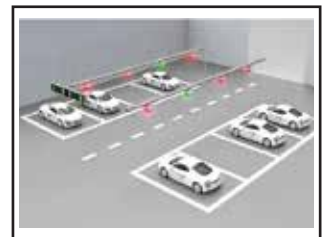

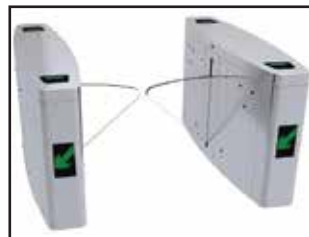

Most of the modern Art Hi-tech residential buildings, Villas and hotel Apartments uses Door phone System as one of the thing which restricts unwanted visitors. There are different type of system available with Analogue and Digital type of communication. Small scale Buildings including Villas and medium class building uses Analogue type of system where as Hi race building uses Digital Systems

ACCESS CONTROL SYSTEM

Access Control System restricts the access to a particular area to certain people either using biometric reader or by proximity cards. The main parts of the access control system includes reader Proximity or biometric type (Fingerprint recognition, Iris Recognition, Face recognition), Electromagnetic lock, Exit push Button, Access controller. The system can also be used for time attendance also

GATE BARRIER & PARKING MANAGEMENT SYSTEM

Barrier gates are the ideal solution if you need to control vehicle transit in public parking areas, car parks, private and block of flats entrances, even when the traffic is heavy.

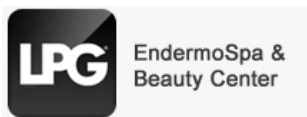

They are made of a motor body and control unit, protected by a case with different finishes, in particular in stainless steel for applications in critical environment conditions, like heavy traffic areas or near the sea.
