“

**VISIOQ IS FORMED OUT OF THE ASPIRATION
TO SERVE THE CLIENTS WHO ARE IN NEED
OF TECHNOLOGY SOLUTIONS WITH A UNIQUE
APPROACH IN DELIVERING THE SAME.**

”

We at VisioQ are driven by endless ambition, passion and endeavor for our clients. Over the past 15 years, Qatar has redefined the dynamics of infrastructure development, which now serves as a template for others across the world. As a result of this tremendous growth, the projects and the subsequent clients in country have been concerned about the quality and timely delivery of solutions. VisioQ aspires to serve the clients in need of technological solutions with a unique approach in delivery. We believe in investing quality time to understand our clients' need and to ensure prompt delivery of solutions in a unique way.

To be the best in what one does, it is required to spend time, effort and money on research and the longing to satisfy each and every client no matter what it takes. VisioQ aspire to emulate that and be an exemplary presence in industry.

With the decisions we've made this year, the strategy we've put in place, the organization we've built, the skilled talent we possess, the unwavering trust reposed in us by our associates and the sound fundamentals of our business model, we believe we are well-positioned to emerge successfully through the tough period ahead.

The Management
VisioQ for Security Solutions

VisioQ, as the name depict, was formed with a vision of delivering the best to Qatar and always tries to create great value and productivity gains for the clients by providing quality solution to various business functions. We bring good experience in technology, customer service, and global standards of operations by continually combining our strategic thinking with the best in Technology, People, and Process. VisioQ possess the following strengths within:

- Strong Financial stability
- Experienced professionals
- Good infrastructure
- Proven credentials with clients
- Service oriented approach
- Flexibility and adaptability

VISION

To be the company that best understands its customers and serve them with the right technology products and solutions.

MISSION

Our mission is to make a customer base with the unique and utmost satisfaction in technology solutions industry. We have seen companies recommend solutions that are not appropriate for the specific clients business. We wish to do it differently by addressing the business needs of our clients and make them as those who have been provided with extreme care, professional service with timely delivery and cost effective/ 'value for money' solutions. We would strive to make our promise happen no matter what it takes. We would do to everything and anything that would takes us to the heart of every customer in Qatar be it commercial or personal and be that 'one company' who keep their promise and be the best service provider and reliable partner to any business.

QUALITY POLICY

VisioQ Quality Policy is consistently providing solutions that meet or exceed customer expectations and international standards, developing user loyalty and so achieving strong business performance.

OUR SOLUTIONS

Extra Low Voltage (ELV) solutions consist of new-age technologies and are now widely used within a building or facility to ensure safe and secure living as well as to significantly reduce energy and communication costs. Be it residential premises or business establishments, ELV system has become a prerequisite and standard practice in the industry. VisioQ has developed its solutions capabilities through several years of hard work and knowledgeable human capital. We strive to bring economically viable and technologically superior technology and ELV solutions to serve our esteemed clients with customized solutions.

SECURITY SOLUTIONS

The Security Solutions, especially the Video/CCTV Surveillance and Monitoring System, have proven to be essential tools in most surveillance and security applications. Essential list of applications includes Banking, Retail, Hospitality, Health Care, Commercial, Industrial, Traffic Management, and City Centers. In all of these applications, video cameras are used as visual tools of the security staff or security design. CCTV systems greatly increase the geographic areas that can be covered by one security professional. No longer are long, arduous guard tours needed, requiring an individual to walk or drive long distances to provide security. Once an event has transpired, video can be used for investigation and evidence in criminal and civil liability cases.

The existence of CCTV Security Systems thus provides a large deterrence to unlawful activity, and provides a strong sense of security to patrons of facilities that use CCTV. VisioQ being an approved company by the regulating authority in the State of Qatar which is the Ministry of Interior – Security Systems Department (MOI SSD), is committed to deliver the legally complied and technically qualified solutions to its customers. As an integrated technology solution and service provider of security solutions, VisioQ offers total physical security solutions, including consulting, design, project management, installation & commissioning, maintenance, servicing the system as well as training, thus fully equipping our clients against any possible security threats.

VisioQ brings the latest, reliable and proven technologies available internationally utilizing our strong partnerships with leading global players that are established providers in the key infrastructure security markets. We are committed to our customers with any particular technology, and are capable and flexible enough to offer our clients customized solutions as per their requirements.

Physical Security Solutions are covering a wider area in its portfolio and VisioQ puts its efforts to deliver the complete solution which would include area like parking managements systems, perimeter intrusion detection systems, various kind of detections, vehicle scanners and beyond. Some of our offering in such areas are;

- Boom Barriers
- Raising Bollards
- Road Blockers
- Parking Entry Station or Pay stations
- Automatic Number Plate or License
- Plate Recognition Systems
- Vehicle Scanning Systems
- Turnstiles
- X-Ray Detection, Metal Detectors, etc.
- X-Ray Baggage Scanning systems
- Intercom Systems (Audio & Video Intercoms)

VIDEO SURVEILLANCE

VisioQ CCTV Solution suite includes wide variety of camera offerings, which include:

- Analog Cameras
- IP Cameras
- IR Cameras
- Thermal Cameras
- Digital Video Recorders
- Network Video Recorders
- Video Management Systems
- ISCSI-based Video Storage Solutions
- Tape-based Backup Systems
- Structured cabling
- Switching and Routing Solutions

VisioQ possess the capability to design and implement the right choice of cost effective solutions to meet the customer requirements and budgets based on our rich expertise in security system design and the network infrastructure required for deploying the surveillance system.

ACCESS CONTROL SYSTEM

Access Control is a mechanism by which a system grants or revokes the right to access some data or application or perform some action. It enables an authority to control access to areas and resources in a given physical facility or computer-based information system. Application of access control usage covers serial controllers, serial main and sub-controllers, serial main controllers & intelligent readers, serial controllers with terminal servers, network-enabled main controllers, IP controllers & IP readers.

SECURITY ALARM SYSTEM

A Security alarm is a system designed to detect intrusion – unauthorized entry – into a building or area. Security alarms are used in residential, commercial, industrial, and military properties for protection against burglary (theft) or property damage, as well as personal protection against intruders. Some alarm systems serve a single purpose of burglary protection; combination systems provide both fire and intrusion protection. Intrusion alarm systems may also be combined with closed-circuit television surveillance systems to automatically record the activities of intruders, and may interface to access control systems for electrically locked doors. Systems range from small, self-contained noisemakers, to complicated, multi-area systems with computer monitoring and control.

VisioQ offers wide range of Security alarm solutions across the industries which are not limited to

- Intrusion Alarm System
- Control Panels
- Theft Detection devices
- Wireless and Wired systems
- Unified Monitoring Solutions
- Mobile Control Application
- Alarm Receivers and monitoring solutions

AUDIO VISUAL & AUTOMATION SOLUTIONS

Audio Visual Solutions have become an integral part of any business due to its complimenting and appeal factor. Be it a consumer business, entertainment or even a corporate meeting room, the necessity of an AV equipment is well recognized. As an evolving business we have cultivated relationships that have led us to now offer new product sales and installations of industry related equipment moving forward. With extensive field knowledge and up to date equipment inventory, we are closely in tune with our industries' technology and demands. VisioQ is diversified in a way that allows us to bid competitively on most solution providers. However, we understand that every client has a unique budget and objective. So it is for this reason that we value each business opportunity without bias.

Our AV Offerings are in primary but not limited to:

- PA/VA/GA
- Conferencing & Telepresence
- Digital Signage
- Presentation System
- Wireless Microphone System
- Guest Room Management System
- Projection System
- Broadcast System
- Intercom System
- Video Mixing and Editing
- LED Seamless Video Wall
- Production Lighting System
- Content Distribution (IT)
- Recording & Streaming
- AV Control & Automation Programming
- Interactive Kiosks
- Assistive Listening System
- Interactive Boards
- 3D Projection

AUTOMATIC VEHICLE LOCATING SYSTEM

Automatic vehicle locating is a powerful concept for managing fleets of vehicles, as service vehicles, emergency vehicles, and especially precious construction equipment, also public transport vehicles (buses and trains). It is also used to track mobile assets, such as non-wheeled construction equipment, non-motorized trailers, and mobile power generators. The other purpose of tracking is to provide graded service or to manage a large driver and crewing staff effectively. An AVL system allows to evaluate the locations of all vehicles in service with driver and other crew in order to pick the vehicle that will most likely arrive at the destination fastest. Our solutions include:

- Automatic Vehicle Locator
- General Surveillance
- Fuel Consumption monitor
- Speed Monitor
- Geo-fencing Solution
- Fleet Management and Emergency Response
